Abstract (en)
[origin: WO9844234A1] The invention relates to a clamp for securing glass panes by means of clamp screw with head and a shank traversing a hole in said glass panes. The shank and head of the screw are designed as separate components. They can be moved towards each other and fastened to each other in axial direction. The invention is characterized in that adjustment nuts are provided with an oblong-holed groove accommodating the retaining flange of the clamp screw. The base of the groove has an oblong hole, through which the shank of the clamp is inserted and guided, thereby forming a supporting flange for the retaining flange.
