Abstract (en)

A light flasher for an article of apparel includes one or more lamps (72,74) that produce light visible from the exterior of the apparel. A switch (40), which may be of the mechanical or electronic variety, causes a switch closure responsive to motion of the apparel. A circuit (33), attached to the switch and the light, causes the lights to illuminate in a series of random duration flashes for a predefined time interval in response to the closure of the switch. <IMAGE>
