Abstract (en)

[origin: EP0926074A1] The container comprises an anti-leak piece connected to the outside of the container body (7). This piece is able to hold the container opening above the level of the liquid in the container body when it rests on a plane surface. The stirrup-shaped piece has an external convex face and an internal face shaped to fit a face of the container. It has a drilling in its top enabling it to be threaded onto the container neck (6).
