Abstract (en)

[origin: EP0926448A2] The arrangement has at least one air channel (5) for the extraction of cooling air and steam, with at least a first flow connection for the extraction of a steam-air flow from the baking muffle and at least a second flow connection for extricating a cooling air flow for the external surroundings of the muffle. The motor (4) drives both a first fan wheel (11) for the cooling air flow and a second fan wheel (12) for the steam-air flow (7).
