Abstract (en)
[origin: WO9843527A1] The invention relates to a soil processing machine comprising a driveable soil processing device (5) with a non-circular processing surface, encompassing at least one processing body (5a, 5b) and preferably also comprising a following suction strip (25') which can pivot around a vertical axis in relation to said soil processing machine. The invention is characterized in that the soil processing machine (5) can pivot around a vertical rotational axis (19) in addition to the corresponding pivoting non-circular processing surface depending upon the direction of travel.
