Abstract (en)
[origin: US6269605B1] The invention relates to a stone structure assembly, comprising a plurality of stones, especially concrete blocks, having similar height, upper and lower sides extending on parallel planes and vertical side walls. In order to place the thirteen stone blocks pertaining to said assembly in such a way that they cannot be displaced and that similarly narrow spacing gaps are formed in-between said stones, two stones are shaped as a prism with the same surface area and eleven stones are shaped as a trapezium with differing surface areas. The stones in the stone structure assembly are configured as a single piece with a bottom section and a top section set back from the peripheral surface of the base section at least in certain areas.
