Abstract (en)

[origin: WO9812496A1] Blast resistant and blast directing container assemblies (11, 12, 13) for receiving explosive articles and preventing or minimizing damage in the event of an explosion. The container assembly (11, 12, 13) comprises a container of blast resistant material and a blast mitigating material (14) located within the container. The container is collapsible for storage when empty. The container assemblies have utility in aircraft, where weight is an important consideration, as cargo holders or containment devices in the passenger cabin. They also are useful as transport devices for hazardous materials such as gunpowder and explosives, e.g., bombs and grenades.
