Abstract (en)
[origin: EP0927530A1] The centering device ensures that the drawer is centrally positioned between the side walls (2) and at least one fixing device is provided, which after the positioning has been achieved fixes the running rails on the stop parts. Between the rails running rollers are arranged and the running rails are divided into a stop part fixed to the furniture body and a running rail for the running rib for the rollers. The running rails in relation to the stop parts are movably fitted to the side walls. The withdrawal guide is provided with a centering device, which when the drawer (3) is moved fixes the position of the running rails (76) on the stop parts (10).
