Abstract (en)

A process is described for preparing products capable of being panelled and/or moulded outgoing from cardboard and/or paper of any recyclable type. A conglomerate of a basic - product bound to a binding agent is formed, which, then, is broken up into a size dependent on the final product to be obtained, to be subjected next to a rest to soak stage, stirring it about every two hours, and to a subsequent pressing and drying stage, with removal of the remaining liquid, and afterwards being subjected to a curing stage in warm air atmosphere. The product obtained is also recyclable, and owns thermic and acoustic - insulating characteristics, being capable of being relief worked or finished with paint, varnish or similar treatments.
