Abstract (en)

[origin: EP0927698A1] The second axle (3) is arranged on the vehicle frame (4) by means of parallel link bars (24), pivotable around vertical axes by pivot operation devices (26). The parallel link bars are linked at one end to the vehicle frame (4) and at the other end to an axle bearer (40) in which the second axle (3) is rigidly screwed. In the axle bearer the second axle can be positioned centrally and rotatably located around a longitudinal axis of the work apparatus.
