Abstract (en)

An assembly (23) for the selective supply of washing agents to the tub (34) of a machine for washing articles of laundry with top loading, wherein said machine has a frame provided with vertical side containing walls and an upper opening (14) for inserting and removing articles subjected to washing in said machine; said assembly (23) being of the type comprising a body (25) for housing the washing agents in appropriate containing compartments (18, 20, 22, 24) and valve means (27) controlled to send selectively to each of said compartments (18, 20, 22, 24) of the detergent agents a respective flow of water for removing the detergent agent and for transporting the same into the washing tub (34) of the machine, wherein means for supporting the valve means comprise a portion (40) which extends from said washing agents housing body (25). Said extension portion (40) being arranged in such a way as to position said valve means (27) supported by the latter between said tub (34) containing the drum (16) holding the articles to be washed and a vertical wall (13) of the frame of said machine. <IMAGE>
