Abstract (en)
[origin: WO9807364A1] A monitoring system that checks the regular intake of a medicament by a patient. The system presents, as inter-coordinated components, a presentation form (1) of the medicament and a detector device (2) for non-invasive detection of a substance to be detected contained in the presentation form in the body of the patient (3). The detection device (2) is designed to enable direct reagent-free measurement of a physically measurable parameter correlating to the presence of the substance to be detected in the body of the patient.
