Abstract (en)

[origin: WO9747369A1] The invention discloses a device (100) capable of being mounted on a container (1) containing a solution (2) to be subjected to a vapour generating treatment, the said device comprising: a condensation chamber (110) the lower part thereof being capable of being connected inside the container, and at least one passage conduit for the vapours (130) from inside the container outwards. The said passage conduit for vapours is arranged so as to connect directly and permanently the condensation chamber with the inlet of a suction head (200), the said device comprises a direct passage conduit for air or liquid (120) from outside into the container, which passes through the said condensation chamber and extends towards the bottom beyond the latter to enable the said passage conduit to be immersed in the solution in the container.
