Abstract (en)

[origin: WO9813645A1] The invention relates to a heat shield component (1) with cooling fluid recirculation comprising a hot gas wall (22) to be cooled, an inlet duct (3) for the cooling fluid (4) and an outlet duct for the cooling fluid (4), wherein the inlet duct (3) is directed towards the hot gas wall (22) and extends in the direction of the hot gas wall (22). The invention also relates to a heat shield arrangement (20) which lines a component circulating hot gas (11), especially a combustion chamber (11) of a gas turbine installation (10) and presents a plurality of heat shield components (1) with cooling fluid recirculation.
