Abstract (en)
[origin: EP0928895A2] The pistons (7) support via slide shoes (8) on a pivot disc (11) pivotable around a pivot axis (14). A drawback device (15) is provided on which the slide shoes support during the drawback movement of the pistons and which has a distance from the pivot axis. At least one support part (31) on the housing (2) is for support of the drawback device. The support part in the area of the pivot axis of the pivot disc is arranged at least on the side of the axial piston machine (1) on which the pistons execute a suction stroke. The support part has a stop (36) spaced from the drawback device. The axial distance between the drawback device and the stop is independent of the pivot angle of the pivot disc.
