Abstract (en)
[origin: DE19641079A1] The invention concerns a flat floor-mop-type covering for cleaning floors, with a cover sheet which, on the upper surface, comprises means for securing it to a mounting and, in the central region of the lower surface, loops or strands. Strands (4, 7) are disposed on both sides of the seam (5) of a peripheral strand strip. In this respect, the inner strands are to be so short that, when they swell owing to the effect of moisture, they bend through approximately 90 DEG in the direction of the surface to be wiped and form a type of brush ring.
