Abstract (en)

[origin: WO9907602A1] The "A" harness, attachable to a paragliding wing by two M closure connectors (inserted in "S" adjustable shoulder straps), is equipped on both sides (or on appendages coming from the shoulder straps) with "G2" parts of two buckles, whose related "G1" parts are on both sides of the "V" chest strap. The "V" chest strap is fixed permanently, by one or more straps, to the "C" leg straps (each of which may be equipped with the usual bouckle) coming from the central part of the seat, or straight to the seat, so that once the "V" strap is hooked, the pilot is retained in the harness.
