Abstract (en)

[origin: WO9814651A1] The invention concerns a device for twisting at least two threads (8, 9) about one another, in particular in the selvage-forming device (7) of a mechanical loom. According to the invention, a rotatable element (10) is provided with a helical endless thread-guide groove (14) in which the selvage threads (8, 9) are guided and axially displaced by rotating the rotatable element such that they cross over one another.
