Abstract (en)  
[origin: WO9813566A1] The invention concerns a motor vehicle closure device (10), with a lock mechanism (31) which can be actuated by an actuating motor (30) with which lock electronics (26) are associated. The closure device further comprises an antenna (28) which can be controlled by transmission electronics (24) and/or reception electronics (25), a transponder (13) which exchanges data with the antenna (28), and a control device (11) which is connected by a bus system (12) via bus electronics (22) to the transmission electronics (24) and/or to the reception electronics (25) and/or to the lock electronics (26). The bus electronics (22), transmission electronics (24) and/or reception electronics (25) and/or lock electronics (26) are structurally incorporated in a housing (20) to form a lock module (19) which comprises a connection (21) for the bus system (12).
