Abstract (en)

[origin: FR2763116A1] The invention concerns a kitchen range comprising a base (10), a heating element (12) arranged on the base (10) and at least an induction sensor (20) for detecting the presence of a conductive container, said induction sensor (20) comprising a coil including at least one spire. The invention is characterised in that the spire has a substantially elongate shape substantially long the range radial direction.
