Abstract (en)
[origin: EP0930153A2] The compressor (1) has a housing (2) with a driven conveyor worm (4). The drive end (8) of the conveyor is turnably fastened to the housing and is connected to the drive unit (3) via a transmission (11). The other worm end projects freely towards the collection chamber (7) for the compressed material. The drive end is formed by a drive shaft (9), which projects outwards through a shaft aperture (10) in the housing. The housing has an upper intake (5) formed by the top end (20) of an intake funnel (21), which is open at the bottom. The funnel contains a dispenser for a cleaning and/or disinfecting and/or processing material.
