Abstract (en)
[origin: EP0930410A1] The lever comprises a stop body (12) which is fixable on a window or door or panel profile and a hand grip (40). The hand grip is axially immovably or rotatably located with a grip throat (44) on the stop body and is in functional connection in the interior of the stop body with a bolt component (70). The bolt component by operation of the hand grip can be brought into engagement with a window or door-side closure part (80). The bolt component is formed as a linearly arranged slide piece, which is longitudinally displaceably located in the stop body and at least sectionally engages behind the closure part in the lock position. The bolt component fits slidingly in the stop body, and has a L- or T-shaped cross-section.
