Abstract (en)

[origin: WO9816385A1] The invention concerns a securing device for a printed carrier (2) in a printing press. In the event of a breakdown, the beginning of the trailing paper sheet is to be secured, so as to protect the printing mechanism against damage owing to paper web coils. To that end, in the event of a breakdown, the paper web (2) can be secured and separated by at least one inflatable hose (6) which acts against a clamping strip (3) and can move from a first operating position (M) into a second operating position (L).
