Abstract (en)
[origin: WO9816388A1] In a device for removing plates from a cylinder of a rotary printing press a folded end (3,4) must be separated from the cylinder (1) using simple technical means. According to the invention, A swivelling spindle (18) disposed in the cylinder (1) has adjacent projections (21) extending in the axial direction and having an elastic effect in the radial direction of the spindle on the following end of the plate (9).
