Abstract (en)
[origin: WO9816456A1] The invention relates to a device for guiding printed products via overlapping buckets (12). Said products are stream fed on to a conveyor (9). In accordance with the invention, this is done by fitting the buckets (12) on an endless chain (19) in a way that they can swivel. This enables the printed products to slip out of the buckets more smoothly and improves the quality of delivery.
