Abstract (en)

[origin: WO9816700A1] The present invention relates to a securing system comprising a first fixing device (14) consisting of a V-bent metal sheet and a second fixing element (15), also consisting of a V-bent metal sheet. The second fixing member (15) is placed crosswise to the first one (14), in a recess (22) provided thereon (14); then, a rod-shaped holding member (33) is pushed through an opening (32) provided in the second fixing device (15). The holding member (33) engages below the top face (18) of the first fixing element (14), thereby interlocking both fixing elements (14, 15).
