Abstract (en)
[origin: EP0931482A2] The adaptation component (1) is a separate small part comprising a head (1a) and a U-profile-shaped shoe (1b) with a slot (2) extending vertically to the head. The shoe is arranged in the profile frame of the rear leg (3) and is tensioned with the aid of a threaded pin (4) in the slot. The head has two vertical apertures symmetrical to the slot. The head apertures accommodate devices (5) for screwing the head to the front leg (7) and the head has a thread (8) arranged in the center for selective accommodation of a first coupling component.
