Abstract (en)

[origin: EP0931742A2] The apparatus to wind the separate strips cut from a web (1), has feed stretches (3, 4) for the separate web strips leading directly away from the point where the strips are separated to the separate winders, defined by their guide rollers (8, 8', 9, 9'). All four guide rollers have a common tangent (T). The leading guide rollers (8,8') for each feed stretch (3, 4) are symmetrical to the perpendicular (O) to the tangents (T), in the center between the rollers. The second guide rollers (9,9') are on different sides of the common tangents.
