Abstract (en)

A portable device for securing valuable objects comprises a closable volume (1) for receiving therein of the objects in addition to security means for permanently divesting the content of the device of its value in the case of undesired handling thereof. An activation of such security means is normally accompanied by a strong smoke or gas emission. In order to avoid this resulting in a risk of suffocation of persons in the vicinity of the device, the device according to the invention is provided with an accumulation volume (21) capable of adequately collecting the released gases.
