Abstract (en)

[origin: EP0932166A1] Disclosed is a polymeric PTC composition comprising an organic polymer and conductive particles having a melting point of not less than 2000 DEG C dispersed therein, with the conductive particles being treated with a coupling agent and a circuit protection device having a PTC element comprising the polymeric PTC composition and at least two electrodes which are pressure welded to the PTC element and electrically connected thereto. The polymeric PTC composition is used to provide a circuit protection device having excellent environmental resistance properties, which exhibits a low resistance under normal operating conditions, and protects the circuit against the over-current even under large electric current and high voltage.
