Abstract (en)

[origin: FR2754461A1] The sport gear, in particular a roller skate, is to be fixed under the sole (18) of a walking shoe (19) comprising towards the front and the back orifices (20, 21) providing access to reinforcement catching zones. It is provided with catching means, projecting beyond a sole supporting plate (3) and capable of being engaged, when being mounted on the sole, into said orifices (20, 21) and an actuating system for moving at least one mobile catching element for fixing the gear to the sole. The catching elements(s) (5), by the operation of the actuating system, has or have a two-phase displacement, viz. a horizontal phase for placing the element (5) above the reinforced catching zone and a vertical phase for blocking it into position.
