Abstract (en)
[origin: WO9812120A1] A can (10) has a cup-shaped closure hood (20), e.g. in the form of an internally threaded screw cup to be screwed on or unscrewed from, respectively, an externally threaded socket (18) formed at an upper portion (16) of the can (10), defining the filler opening. In the can (10), is desired e.g. a lubricating-oil-gasoline-mixture, according to percentage corresponding to e.g. 2 or 4 % lubricating oil to the gasoline, suitable for a two-stroke internal combustion engine. In order to be spared from calculating the lubricating oil volume corresponding to 2 and/or 4 % of the gasoline volume upon almost full can (10) and, likewise, to be spared from bringing with one a separate measuring cup, the closure hood (20) is shaped, designed and dimensioned as a measuring cup.
