Abstract (en)
[origin: WO9907938A1] A prefabricated reinforced concrete slab (10) for producing a composite slab construction, in particular a solid track for high-speed trains, has at least two steel rods (19) which extend in the longitudinal direction of the finished reinforced concrete slab (10) and protrude beyond both front sides of the slab (10), each steel rod (19) being immovably anchored within the finished reinforced concrete plate (10) only in one spot and otherwise being freely extensible.
