Abstract (en)

[origin: WO9818058A1] The present invention pertains to a method for electrophotographically printing a multicoloured image, comprising the following steps: a) surface elements of a layer system are loaded on a negative initial potential (step S1); b) the surface elements are exposed to varying degrees (step S2); c) the surface elements are processed with negative particles of a third colour (step S3); d) the surface elements are arranged near a source of light scattered in a substantially homogenous manner (step S5); e) the surface elements are processed with negative particles of a second colour (step S6).
