Abstract (en)

[origin: EP0933280A2] The system uses a resolution unit (10) which includes a determination of solution module (11) to search for the framework of a corrected solution according to a heuristic search (12,13) chosen by applying an optimization algorithm to the functional model. A refined search model (16) uses heuristic searches (17,18) chosen according to an optimization algorithm applied to the topological model
