Abstract (en)
[origin: EP0933306A1] The flush block is contained in a basket (8). This is connected to the refill container (1) so that it can be removed for use. At least one of the apertures in the basket wall is used as a filling aperture for the additive, esp. a gel, and is adapted in size and shape to the discharge opening (5) of the refill container. The container is a bottle in an upright carton (3), and this has a cut-out (17) for removable connection with the retainer loop (13) of the basket, with which it is suspended in the lavatory bowl.
