Abstract (en)  
[origin: EP0933736A2] The method involves using at least two devices, each contg. a radio transmitter, radio receiver, control and processing unit, data memory and display elements. The devices can switch between data entry and communications modes. In data entry mode the characteristics sought for the transmitter and defined characteristics by the transmitter are entered. In communications mode the entered data are transmitted in call status; in rest status the received data are compared with the entered data and an audible and/or visible signal generated if defined agreement is achieved. An Independent claim is also included for an identification arrangement.
