Abstract (en)

[origin: WO9816107A1] A method for the systemic control of blood-sucking parasites in warm-blooded animals or for the prevention of reinfestation, which comprises administering systemically to the warm-blooded animal a compound of formula (I), wherein R, R₂, R₃, R₆, X and n are as defined in claim 1, in an amount that affects the growth of one of the early states of development of the parasite in such a manner that the parasite does not reach the adult stage or that the adult parasite is rendered sterile.
