Abstract (en)
[origin: WO9817566A1] The present invention relates to a device for de-cambering paper conveyed from a fixing station and presenting a convex or concave cambering caused by the fixing operation, the cambering direction being parallel to that of the paper transport. The decambering device contains one adjustable element (12) intended to eliminate the convexity, combined with an adjustable element (2, 4, 6, 8) designed to eliminate the concavity. The paper to be de-cambered runs through both elements.
