Abstract (en)
[origin: WO9817883A1] The lockable tamperproof box (1) serves for sales presentation of compact-disk cassettes (5), audio tape cassettes, video cassettes, or the like. A special tool, such as a powerful magnet, is needed to unlock it. When the cassette (5) is inserted into an insertion aperture of the box (1), a rear part (7) of a locking device (6) is shifted in the direction of insertion into a lock-in position, and catches there automatically. In the process, a front part (8) of this device (6) is rotated about the direction of insertion by forced coupling with the rear part (7), and a locking element (8.2) mounted on the front part (8) is swivelled into the insertion aperture. The tamperproof box (1) can be filled automatically, and is self-locking.
