Abstract (en)
[origin: WO9818059A1] The present invention relates to a processing machine, especially for an electrophotographic printer or an electrophotocopier, in which the toner is supplied in a regulated manner to a developing solution, and both components are mixed to a homogeneous developing mixture. The processing machine comprises at least one temperature sensor intended to monitor the working temperature of the developing mixture/toner. The temperature sensor is connected to an adjusting device acting upon at least one of the working parameters of the processing machine.
