Abstract (en)
[origin: EP0934841A2] The outside (6) of the sun blind (1) on the roof side has a recess (7) communicating with the inside of the blind. A connecting opening (13) for the climate control system is mounted inside the vehicle in the roof (3) so that in its first end position the blind can be positioned against the roof so that the connecting opening and recess cover one another. Sealings (15) are provided which in the first end position of the blind fit between the circumference enclosing the recess and a socket enclosing the connecting opening.
