Abstract (en)

[origin: EP0934888A1] The packaging device for soft cheese pots is constituted by a basket with a bottom (2). A central truncated protuberance (4) is raised from the bottom which defines with the basket walls (3A-3D) four housings each intended to receive a pot. The top of the protuberance has a plane surface (7) extending parallel to the basket bottom. The peripheral edge of each pot is supported on this plane surface. Hooks (9) on the plane surface engage the lower edge of each pot cover and bosses (11) in the lower part of the housings clamp the lower edge of each pot.
