Abstract (en)
A packet for food products, especially baked products such as rusks and biscuits, comprises a product container (12) having a first, inner wrap (14) that supports the products and a second, outer wrap (16) that holds the container together. The packet has an opening (18) providing access to the products inside, and a flap to close the opening that can be lifted from a closed position to an open position. In this packet, the closing flap is made from a portion (20) of the inner wrap (14) and, to keep it closed, there is a first connecting portion (26) on the flap (20) and a second connecting portion (28) in the outer wrap (16); when the flap is in the closed position, the first connecting portion (26) is tucked into the second connecting portion (28) in the outer wrap (16) and stops the flap (20) from opening.
