Abstract (en)

[origin: EP0934896A2] The shape of the bucket wheel pocket (10) used to take up the printed copies can be adjusted by an adjustor wherein the adjusting means (4) and adjusting rods (3) interacting therewith are connected to the sheet form adjusting bodies (2) so that the shape of several bucket wheel pockets (10) is adjusted simultaneously by displacing the adjusting means. The adjusting means can be a disc rotatable coaxial relative to the bucket wheel and can have recesses in which the adjusting rods are guided during displacement of the adjusting means.
