Abstract (en)
[origin: EP0935060A2] The exhaust gas feedback system is designed, so that the temp. of the exhaust gas in the gas feedback line (14), is determined in the flow direction before the non-return valve (18) and is supplied to a control unit (15). So that for example, the exhaust feedback control valve (17) is regulatory close able, depending on a specific temperature limit of the exhaust gas.
