Abstract (en)

[origin: EP0935219A1] The method involves issuing the pass to the user from an output device (5) before passing through an entrance barrier (4). The user then inserts the pass with tariff information into a receiving device (10) to open an exit barrier (8). Before being dispensed to a user, the pass is provided with information about the tariff if the user provides corresp. information to the output device before passing through the entrance barrier. An Independent claim is also included for an arrangement for controlling the output and return of validation passes.
