Abstract (en)
[origin: WO9813655A1] A refrigerator has a housing with an inner plastic lining (13) surrounded by a heat-insulating material (12) and fitted at its outer side facing the heat-insulating material (12) with a reinforcement body (20) embedded in the heat-insulating material (12) for holding components on the inner lining by means of screw-like fastening means (31). The reinforcement body (20) is provided with at least one receiving section (21) that can be form-fitted and/or frictionally connected to a cup-shaped cavity (14) in the inner lining (13). The receiving section (21) is joined to a fastening section (27) with a prefabricated bore (30) into which screw-like self-cutting fastening means (31) can be inserted.
