Abstract (en)

A flames and fumes stopping device for a suction duct of gaseous mixtures from a room comprises a normally-empty inverted siphon, in the duct; a water tank holding a volume of water sufficient to flood the inverted siphon, at a level higher than the siphon and having a gravity discharge pipe, intercepted by an electrovalve, discharging into the siphon; a sensor of the temperature of the gaseous mixture passing through the duct generating an electric command that triggers the opening of the electrovalve when a certain temperature threshold is exceeded. <IMAGE>
