Abstract (en)

[origin: EP0936301A2] The stock inlet to deliver fiber pulp to the water removal section of a papermaking machine, and especially for tissue paper, has at least one dividing wall (8) for a stock inlet, with two or more layers. A rigid and one-piece steel wedge-shaped blade (12) is bonded to the dividing wall. The blade is tensed against the dividing wall (8) by a tie rod (13). An eccentric adjusts the setting of the dividing wall and blade unit.
